

Contents

1 Basic Physics of Gases and Plasmas	1
1.1 Matter in Form of Gases and Plasmas	1
1.2 Basic Physics of Gases.....	2
1.2.1 Classical Gas Laws	2
1.2.2 Third Law of Thermodynamics and the Roots of Quantum Statistics	5
1.3 Basic Physics of Plasmas	8
1.3.1 Coulomb Interactions and Ionization Equilibrium	8
1.3.2 Different Plasma States on Earth.....	12
References	16
2 Elements of Quantum Statistical Theory	19
2.1 Many-Body Quantum Theory	19
2.1.1 Quantum States	19
2.1.2 Identity and Symmetry	24
2.2 Quantum Dynamics of Many Particles.....	27
2.2.1 Schrödinger Equation.....	27
2.2.2 Pure and Mixed Ensembles	32
2.3 Standard Approximations for Many-Particle States	35
2.3.1 Hartree-Fock Approximation	35
2.3.2 Born-Oppenheimer Approximation, Virial Theorem and Coulomb Stability	36
2.3.3 Thomas-Fermi Theory of Multi-Electron Atoms	38
2.4 Quantum Statistical Ensemble Theory	41
2.4.1 Microcanonical and Canonical Ensembles	41
2.4.2 Grand Canonical Ensembles	42
2.5 Theory of Fluctuations and Relaxation Processes	44
2.5.1 Einstein-Onsager Relaxation Theory	44
2.5.2 Correlations, Spectra, and Symmetry Relations.....	49
References	52
